StatsBomb API Competitions Specification v1.0

[StatsBomb API - last updated 23 *March 2018]*

This document describes the API used to request a listing of each Competitions and Season combination for which the user has licensed access. Credentials need to be supplied as described in the general API notes.

Request

The API can be accessed by making a request to https://data.statsbombservices.com/api/v1/competitions. No parameters should be specified.

Response

The response will be in JSON format. The response is an array of Competition-Season objects with the following properties:

Column	Type	Description
competition_id	Integer	The unique identifier for the competition.
season_id	Integer	The unique identifier for the season.
competition_name	String	The name of the competition.
country_name	String	The name of the country the competition relates to (or region for international competitions)
season_name	String	The name of the season.
match_updated	DateTime	The date and time at which a match within this competition and season was last updated.

match_available	DateTime	The date and time at which an available match was updated, or a match was made available (whichever is more recent).
